CartNest Payment Gateway Reconciliation

CartNest payment gateway reconciliation — CFO summary

Paid order sales were ■18,984,402.00. Gateway settlement credits identified in the bank were ■16,984,048.56, giving a sales-to-bank difference of ■2,000,353.44. Expected gateway net settlement was ■18,827,062.38; the unexplained gateway-to-bank gap is ■-1,843,013.82.

Largest reconciling items:
1. ■1,265,526.90 relates to 2 settlement batches dated in October and is a timing difference, not a loss.
2. ■26,412.89 is short-paid across settlement batches and should be raised with the gateway.
3. ■551,074.03 is the September batch with no matching bank credit and requires bank/gateway tracing.
4. ■1,185.20 of MDR/GST overcharges was identified across 55 transactions and should be recovered from the gateway.
5. Duplicate captures, invalid-status captures, and paid orders without a capture are listed at record level in exceptions.csv; customer-impacting duplicate charges should be refunded after confirmation.

Recommended actions:
- Confirm October-due batches against the October bank statement.
- Raise the short-paid and missing settlement batches with the gateway using the batch IDs.
- Recover the calculated MDR/GST overcharges.
- Investigate duplicate captures and payments against failed/cancelled orders before customer remediation.

Pattern to monitor: UPI and Wallet transactions account for the MDR/GST overcharge exceptions; monitor fee-rule application by payment method and amount band.
